REASONS FOR ALLOWANCE

1. Claims 1-45 are allowed in light of applicant's arguments/amendments. A statement of the examiner's reasons for allowance follows.

2. Applicant's independent claims are directed to a polarizing conversion device (claim 1) with particular features for controlling unwanted stray light, a polarizing illumination device that includes the instant polarizing conversion device (claim 8); a display apparatus (claim 18) that includes the polarizing illumination device and a modulating device; a projector (claim 19) that includes the polarizing illumination device, at least one modulating device, and a projection optical system; the method embodied in the instant polarizing conversion device (claim 22); and to an alternative representation of the instant polarization conversion device in a means-plus-function format (claim 27). Each of these independent claims includes, and is distinguished over the prior art by, the extant features/limitations of the polarizing conversion device in claim 1. It includes: a polarizing separation element having a light-incident side, a light-emitting side, and a polarizing separation plane that separates said **P**-state and **S**-state polarized beams by transmitting one of said **P**-state and **S**-state polarized beams there-through toward the light-emitting side of the polarizing separation element, and reflecting another of the **P**-state and **S**-state polarized beams. A reflecting plane is disposed substantially parallel to said polarizing separation plane reflects said another of the **P**-state and **S**-state polarized beams reflected by said polarizing separation plane toward said light-emitting side of the polarization element. In particular, a selective phase plate aligns a polarization direction of one of said **P**-state and **S**-state polarized beams separated by the aforementioned polarizing separation element with a polarization direction of another of the

Art Unit: 2873

P-state and S-state polarized beams, and a light-shielding element which prevents light from directly entering the reflecting plane interposed at the light incident side of said polarizing separation element. The prior art taken either singly or in combination fails to anticipate or fairly suggest the limitations of applicant's independent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The claimed invention is therefore considered to be in condition for allowance as being novel and nonobvious over prior art.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David N. Spector whose telephone number is (703) 305-1521. The examiner can normally be reached at this number Monday through Friday between 6:00 AM and 2:30 PM.
